Dear Sir:

IN THE CLAIMS

1. (amended) A display sheet having polymer dispersed liquid crystals,
comprising:
- a) a substrate;
 - b) a state changing layer disposed over the substrate and defining first and second
surfaces, such state changing layer having the polymer dispersed liquid crystals
having first and second optical states, which can change state;
 - c) a first conductor disposed over the first surface of the state changing layer;
 - d) a second conductor on the second surface of the state changing layer so that
when a field is applied between the first and second conductors, the liquid crystals
change state; and
 - e) a nonconductive, field spreading layer having a transparent electrically
conductive polymer dispersed sub-micron particles, said nonconductive field
spreading layer disposed between the state changing layer and the first conductor to
